

## electrical measurements of process temperature measurements 10 000 points ICO 52

The function of measurement and range, as well as put on a specific scale are programmable.

The parameters thus configured are protected against all inopportune modifications.

- Format 72 x 24 mm
- Function, ranges and scale programmable
- Configurable on site

### functions

#### Measure .....

The ICO 52 allows measurements of voltage, current and resistance of process as well as the temperature measurements using platinum resistor probes or thermocouples.

#### Automatic change of range.....

In voltage and resistance.

#### Hold the measurement .....

It is carried out by a simple short-circuit on the back connector block.

#### Scaling .....

The value to be entered using keyboard, while the value of measurement corresponding can be introduced of the same way, is measured by the instrument. This possibility is very interesting for the errors corrections on temperature ranges.

#### Temperature measurements.....

(1) For a type of determined sensor, the commutation of range and the change of resolution can be automatic.

Possibility of going beyond of range.

Display in °C or °F.

(2) In ± (% reading + nb de °C) on 1 year without junction of reference.

The typical error brought by the junction of reference AN8002 is of 0,3 C.
